

Take a Closer Look at the Wisconsin State Laboratory of Hygiene

Since 1903, Wisconsin citizens have depended on the Wisconsin State Laboratory of Hygiene (WSLH) at the University of Wisconsin-Madison to help reach and maintain the high quality of life they expect. As the state's public, environmental and occupational health laboratory, the WSLH plays a vital role in maintaining the health and safety of Wisconsin's citizens, protecting the environment and providing training to other professionals.

The WSLH's scientists and academic leaders offer quality services in an array of technical specialties, including microbiology, cytogenetics, cytology, cytotechnology education, environmental sciences, industrial hygiene/occupational health, newborn screening, proficiency testing, radiochemistry, toxicology and virology.

In addition, we work closely with the state's Division of Public Health, Department of Natural Resources, Department of Agriculture, Trade and Consumer Protection, local health departments, health care providers and private-sector laboratories.

Our goal is to partner with others to keep people and our ecosystem healthy. As a world-class laboratory at the University of Wisconsin-Madison, we explore new ideas that benefit the health of the state, the nation and the world. We take our role to provide public service to heart every day.

The WSLH and the University of Wisconsin

UW-Madison ranks as one of the top research universities in the country. As a part of the UW-Madison, Wisconsin State Laboratory of Hygiene staff participate in this vibrant research and education community, fostering partnerships with academic departments and performing vital human and environmental health research. WSLH staff also provide education and training to undergraduate and graduate students (UW-Madison and UW-La Crosse), physicians in training and working professionals in the areas of clinical, environmental and occupational health and safety.
