SARS-CoV-2 Update

- In Wisconsin, 2.7% of the 73,199 specimens tested positive by PCR at WSLH and clinical labs reporting testing data. The percentage of positive tests reported has been decreasing.
- Nationally, 6.4% of the 1,617,344 specimens tested positive by PCR at clinical, commercial and public health labs. This is a small increase from the previous week (6.1%) positivity.
- Increases were noted in HHS regions 2 (North East), 4 (South East), 6 (South Central), 7 (Central) and 10 (Pacific Northwest).

Wisconsin Influenza Update

- No influenza positive tests were reported.

To enhance surveillance activities for influenza viruses, the WSLH asks labs to please send:
1. A sampling of specimens from influenza-related hospitalizations (e.g., no more than 1 per week).
2. Specimens that fail to subtype (Ct <35) if subtyping for 2009 pdmH1 and H3 were performed.

Other Surveillance Data-Wisconsin

### Respiratory

- SARS-CoV-2 was the predominant respiratory pathogen reported.
- The percentage of positive SARS-CoV-2 tests reported decreased.

### Gastropathogens

- Campylobacter and Salmonella sp. were the top two gastropathogens reported.
- Other reported included EPEC (6.5%) and P. shigellae (1.2%), Astrovirus (<1%), Vibrio sp. (<1%) and Y. enterocolitica (<1%).
